

Fred Williamson Demo  
Virginia Woodturning Symposium 2018

Fred Williamson will demo turning techniques for deep bowls and vases. He will first cover mastering smooth curves at the bottom of deep open bowls, featuring the home made gouge extender for added control and leverage, and the best grinds to achieve the smoothest cuts. The second half will focus on the homemade boring bar for hollowing out closed shapes, and he will turn a tall narrow vase (a small one). In addition he will be demonstrating various other homemade accessories, such as the thickness caliper and the depth gauge.
